DETAILED ACTION

This Office Action is in response to the election for the above identified patent application.

Election/Restrictions

1. Claim 3 is withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected group, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in the reply filed on June 18, 2007.
2. Applicant's election with traverse of Group I, Species of Figure 2 in the reply filed on June 18, 2007 is acknowledged. The communication fails to include arguments with respect to the traversal of the election and therefore the requirement is still deemed proper and is therefore made FINAL.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by Yoshioka (JP 2001-124173).

Yoshioka discloses a screw used in combination with a screw follower, the screw being formed as a shell having threads formed on an outer surface thereof.

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 4-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yoshioka (JP 2001-124173).

Yoshioka does not appear to disclose the thickness of the cylindrical shell, however it would have been obvious to one in the art to vary the size of the screw, including the thickness of the shell, in order to reduce material cost and to reduce the weight of the device. A change in size is generally recognized as being within the level of ordinary skill in the art. In re Rose, 105 USPQ 237 (CCPA 1955).

Yoshioka does not appear to disclose the material of the screw as being nickel-base material. It would have been obvious to one having ordinary skill in the art at the time the invention was made to form the screw from a nickel-base material, since it has been held to be within the general skill of a worker in the art to select a known material on the basis of its suitability for the intended use as a matter of obvious design choice. In re Leshin, 125 USPQ 416.

7. Alternatively, claim 6 is rejected under 35 U.S.C. 103(a) as being unpatentable over Yoshioka (JP 2001-124173) as applied to claim 1 above, and further in view of Hattori (JP 2000-390458).

Yoshioka does not appear to disclose the material of the screw as being nickel-base material, however it was known in the art to form a screw from a nickel-base material. For example, the prior art of Hattori teaches a screw formed of Manganese-nickel-copper alloy. It would have been obvious to one of ordinary skill in the art at the time the invention was made to form the screw of Yoshioka from a nickel-based material, as taught by Hattori, motivation being to form a screw that is suitable for use in a magnetic field and/or form a screw using low cost materials.

Conclusion

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Note the hollow screws of JP 8-200466, JP 10-192130, and EP 0 261 431.
